

# CometTS (Comet Time Series (CometTS) Visualizer)

Dante Lozano-Perez\*

August 8, 2020

## 1 Introduction

Comet Time Series is a python tool with the objective of creating different time series from a region of interest. this program uses images and CSV files to create a time series analysis.

## 2 Content

The program demo, is creating a time series analysis of MALAGA, Spain. This analysis is made from the VIIRS images from the satellite and create a forecast using ARIMA models.

## 3 Graphs

## 4 Conclusion

In Conclusion, We can see that with this program, it is easy to observe the changes that the place, in this case Malaga, Spain, has been throughout the time and also create a quick forecast of the area.
